

TOPAS

Traffic Open Products and Specifications

TOPAS – An Update

Dr Mark Pleydell, TOPAS Management Board

JCT Symposium - September 2016

Scope Of Presentation

- Objectives
- Background - Type Approval
- TOPAS
 - How it came into being
 - What it does.
 - How it does it.
 - How it applies to you.
- Questions

JCT Symposium - September 2016

Objectives

To convey information on:-

1. TOPAS Product Registration (and what is involved).
2. The range of specifications and standards (and therefore products) covered by TOPAS

JCT Symposium - September 2016

Type Approval

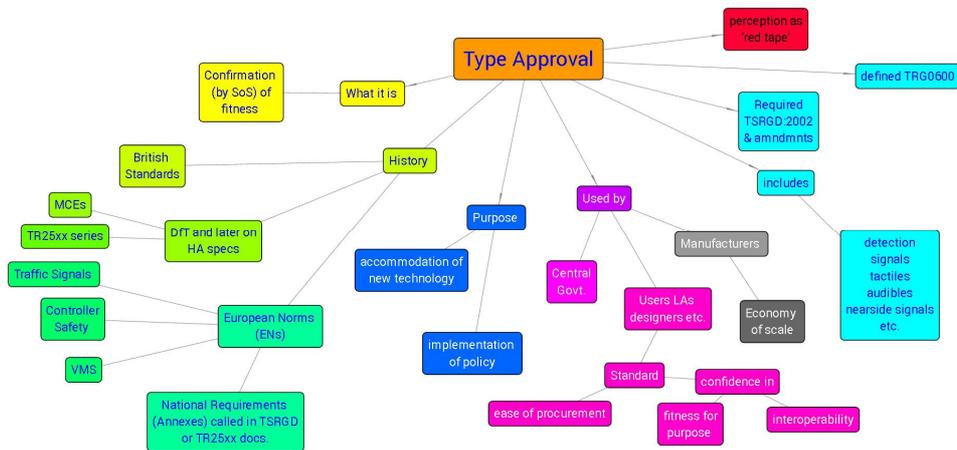

- A Government mandated process for confirming fitness of purpose of equipment against national specifications.

It ended 21/4/16

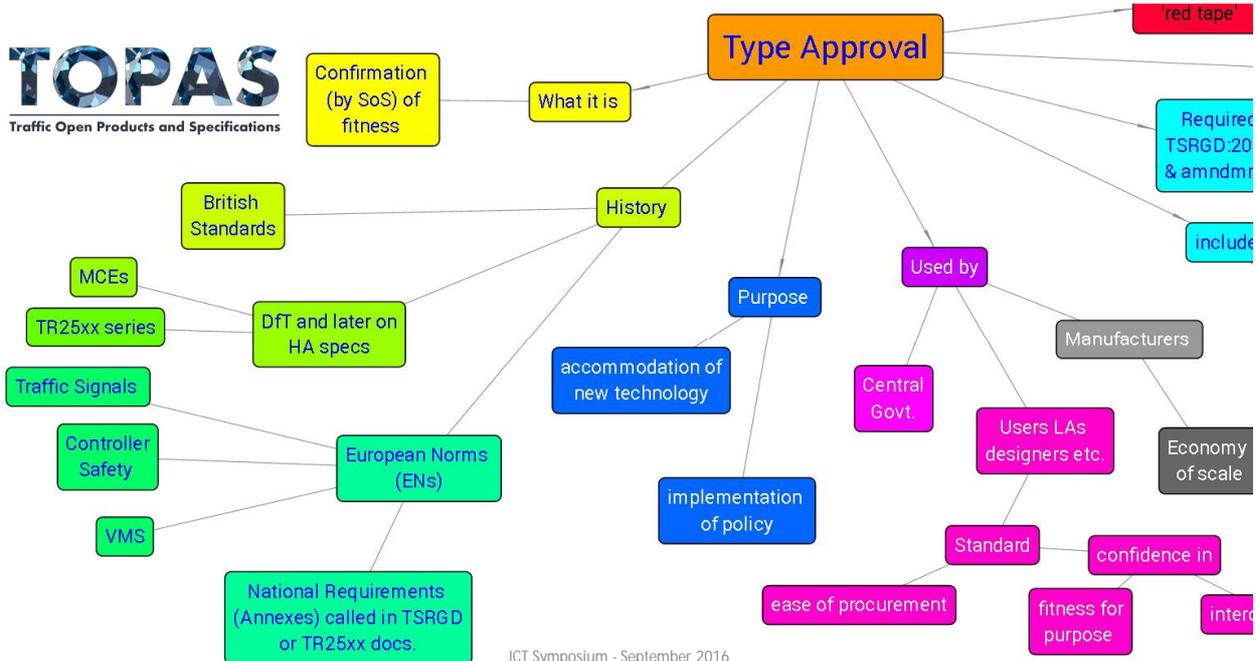

- Type Approval of new traffic control equipment has now ceased.
- Existing Type Approvals remain valid
- What has happened
 - to specifications
 - to industry liaison – users, manufacturers and government

JCT Symposium - September 2016

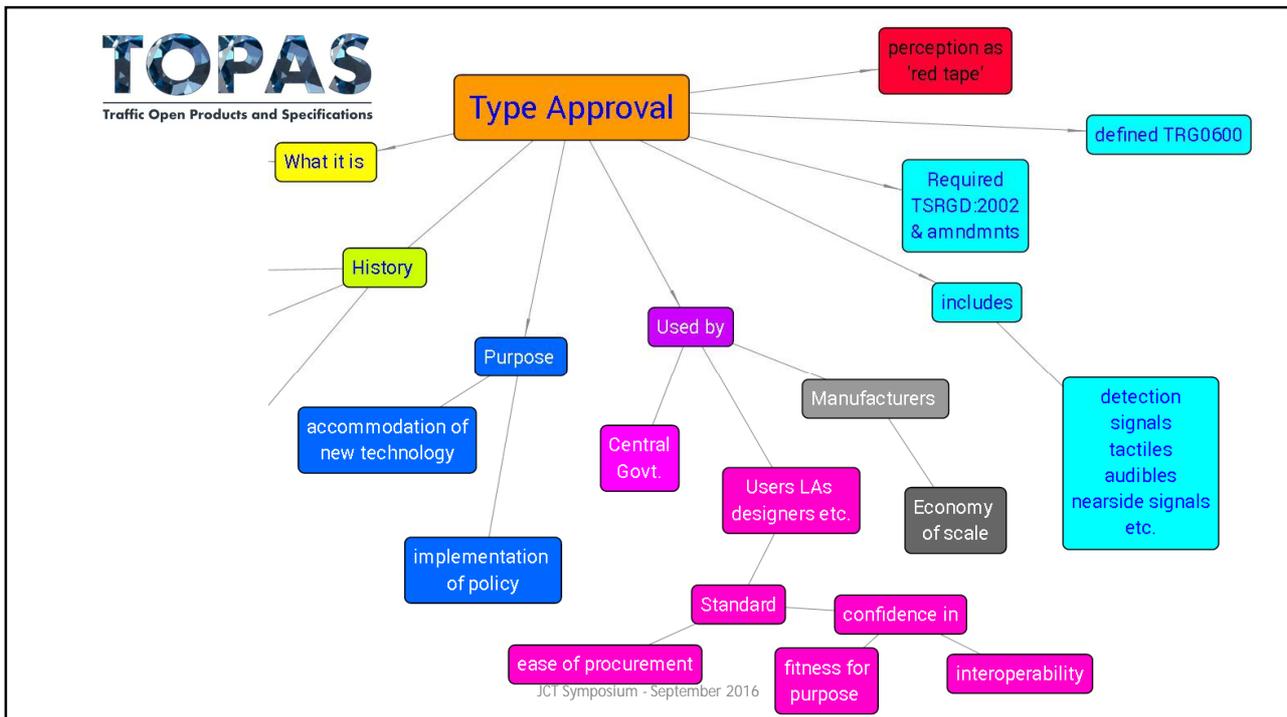

Type Approval – A mind map

JCT Symposium - September 2016

JCT Symposium - September 2016

Type Approval

What did Type Approval mean for users/designers/manufacturers?

- Interoperability – equipment from one manufacturer could reasonably be expected to work with equipment from another
- Confidence in the performance of the equipment.
- Confidence in the function of the equipment.
- A standardised market, with lower prices

Type Approval

Why have a successor?

For all the reasons just given, and for continuity with existing Type Approved equipment.

The successor is TOPAS (Traffic Open Products And Specifications)

JCT Symposium - September 2016

Local government and industry response

- The Traffic Technology Forum (TTF) was formed in 2012, to represent suppliers and users of traffic control and associated equipment a successor to EITAC.

The TTF has evolved three key aims:

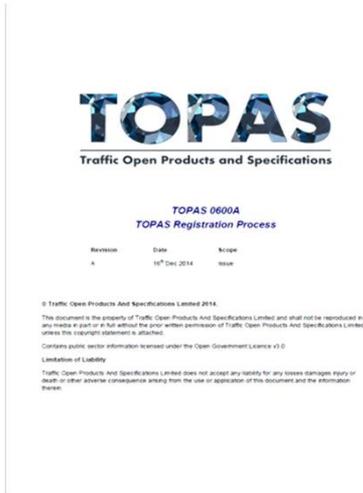

- To identify areas for collaboration
- To provide a joint industry and user response to consultations and to discuss in-service issues
- To specifically shape the consultations with DfT and HA and provide proposals on the future specification and approval landscape

The main TTF proposals have resulted in the formation of TOPAS Ltd

JCT Symposium - September 2016

OPEN

- TOPAS is a Not For Profit company which
 - Manages and develops the former HA standards as **procurement specifications**
 - Provide a means for new specifications to be created and refined with End User and Industry input and oversight
 - Provide a (more rigorous) process for manufactures to Register their products against the specifications
- Registers Product: giving purchasers confidence that products comply with nationally used specifications.
- ADEPT mandate (as far as they are able) that Local Authorities require that products used on the highway are TOPAS registered.
- Is as open as possible

JCT Symposium - September 2016

TOPAS structure – Three party representation

Director – Brian Lyus
 Management Board
 Chair - Rotates Annually

Initial funded from
 DfT
 ARTSM
 ADEPT

Running costs funded from product registration fees.

ARTSM
 Represented by four Management Board members

ADEPT
 Represented by four Management Board members

CENTRAL GOVERNMENT
 Represented by four Management Board members
 England, Wales, Scotland, N Ireland

JCT Symposium - September 2016

TOPAS Product Registration

- Fundamental to TOPAS is the concept that products are Registered
 - This is not a Type Approval and is not mandatory
- The Registration process is defined in TOPAS 0600A
 - Is intentionally very similar to the former Type Approval process defined in TRG 0600A
- TOPAS Registration still relies on a manufacturer 'self-certifying' compliance with the appropriate TOPAS specifications
- Critically, registration also involves an independent review of a Product Technical File by an independent Technical Assessor
 - More rigorous than the HA Type Approval process it replaces.

JCT Symposium - September 2016

What does this registration mean to users?

Like Type Approval it gives users more confidence that :-

- The manufacturer is a responsible member of the traffic control community.
- Their products will meet published and appropriate specifications.
- Their products will work with other manufacturers' products and with former type approved equipment.
- It offsets the risk and effort to users.
- **As Products become Registered they are listed on the TOPAS website.**
- This easily allows users to check what is registered and any conditions associated with that Product

JCT Symposium - September 2016

What Products Are Covered By TOPAS?

- Vehicle Detection
- Pedestrian Detection
- Those facilities of permanent traffic signal controllers not in the new TSRGD or in European Specifications, (BSEN12675, BSEN50556)
- Those facilities of portable traffic signal controllers not in the new TSRGD
- Tactiles and Audibles
- Nearside Signals
- Those elements of VMS not in BSEN12966 – including over-height vehicle detection systems.
- Check the website for the full picture

JCT Symposium - September 2016

Specifications

- TOPAS has taken ownership of the former Highways England TR25XX specifications
- These have been updated to become **procurement specifications**
 - Now include a new appendix (Z) which defines the Technical File requirements.
 - The current generation are identical in detailed content to the equivalent current HA specification, which will enable Manufactures to simply Register their current approved products with minimal effort
- The HA undertook (2012/13) a review and update of many of their specifications
 - This will be of enormous help to TOPAS as the basis for new specifications versions.

HA Reference	Issue	Date	TOPAS reference
TR2500	A	01/11/2005	TOPAS 2500A
TR2502	B	01/03/2011	TOPAS 2502B

JCT Symposium - September 2016

TOPAS – Current Position

TSRGD 2016 came into effect on 22nd April 2016

No new Type Approvals can now be submitted

Unless subjected to a substantial change in their design all products with existing Type Approvals remain in force and may be used on the Highway.

TOPAS is the preferred process for managing:-

UK specifications

A UK wide product register

JCT Symposium - September 2016

- Acknowledgments
- Setting up and running of TOPAS has and continues to place substantial demands on all of the Management Board members and many others from within Central and Local Government and Industry.
- Without this support the future of the Traffic Sector in the UK would be considerably less certain.

Thank you for your attention
